SOLAR STREET LIGHTING POLE

Solar Octagonal Pole | Post Top | Flange Type

8

DOUBLE POST TOP

Structural Design Statement

Our poles are specially engineered to withstand the additional weight and increased wind sail area caused by integrated solar lantern systems. To ensure structural integrity, we utilize 2.5mm and 3.0mm thick steel plates for the pole body, with heights ranging from 7m to 12m (double arm).

The flange base and anti-sinking plate are customized in size and thickness based on the pole height and project requirements.

For detailed specifications or custom configurations, please contact our team of specialists.

FLOODLIGHT POLE

Circular Hollow Hinged Column Pole | Floodlight Mounting

A circular mid-hinged column designed for easy maintenance access, allowing the pole to be lowered safely without the use of lifting equipment. Suitable for floodlight or area lighting applications in various outdoor environments.

Application

Residential subsidiary areas, pedestrian walkways, car parks, and other low-traffic or decorative environments.

COMPOUND LIGHTING POLE

Octagonal Pole | Mid-Hinged Pole | Flange Type

The pole supports post-top mounted fittings, including compound lights and decorative lanterns, making it suitable for both functional and aesthetic installations.

Application

A lightweight, corrosion-resistant pole designed for various indoor and outdoor applications, including signage, lighting, CCTV mounting, traffic sensors, and smart city devices. Manufactured from high-grade aluminium, it offers long-term durability with minimal maintenance, making it ideal for urban, commercial, and landscaped environments.

Available in multiple configurations, these poles can be customized to suit specific urban and highway traffic management requirements. They can also serve a dual purpose, integrating both traffic signals and street lighting on a single structure—maximizing functionality and minimizing street clutter.

Application:

Designed for use in smart cities, integrated surveillance systems, traffic monitoring, and urban infrastructure.

Ideal for deployment in urban streetscapes, highways, commercial districts, public spaces, and transport hubs where multiple technologies (e.g., CCTV, sensors, environmental monitors, communication devices) are consolidated into a single pole system.

Application:

Designed for use in smart cities, integrated surveillance systems, traffic monitoring, and urban infrastructure. Ideal for deployment in urban streetscapes, highways, commercial districts, public spaces, and transport hubs where multiple technologies (e.g., CCTV, sensors, environmental monitors, communication devices) are consolidated into a single pole system.

Application:

Suitable for installation in high-visibility locations such as petrol stations, fast food outlets, commercial zones, residential areas, and other urban environments where aesthetics and functional integration are required.

➤ Pasar Payang, Terengganu

Application

A high-strength monopole antenna pole designed for telecommunication and broadcasting applications, featuring climbing rungs with a rest platform to support safe and efficient maintenance access. Suitable for deployment in urban zones, rural areas, and remote sites, this structure is ideal for mounting 4G/5G antennas, microwave dishes, and other telecom equipment, where secure vertical access is essential.

An integrated solution for smart urban infrastructure, the Smart Pole is engineered to support a range of digital technologies within a single, sleek structure. It combines lighting, surveillance, connectivity, and environmental monitoring to enhance safety, efficiency, and sustainability in modern cities.

Ideal for deployment in smart cities, urban centers, commercial zones, highways, transit hubs, and public spaces requiring advanced monitoring and communication features.

➤ Cyberjaya, Selangor

Application

A space-efficient vertical structure designed for mounting telecommunication equipment such as 4G/5G antennas, microwave dishes, and IoT devices. Ideal for deployment in urban areas, industrial zones, highways, and remote locations, offering high structural integrity with minimal land footprint.

The dimension and height of service doors vary based on the specific design and overall pole height requirements. Custom configurations can be provided upon request.

A foundation anchoring system suitable for amenity lighting poles, octagonal poles, decorative poles, and other flange-mounted structures.

Provides secure and stable installation to concrete foundations. Dimensions and specifications are determined based on the pole design and load requirements.

Applicable for heavy-duty poles such as highmast, monopoles/telecommunication poles, and other large flange-mounted structures.

Designed to provide secure anchoring to concrete foundations, with specifications tailored to pole design and load requirements.

A protective fastener used to cover exposed bolt threads, enhancing safety, durability, and visual appearance in pole installations. The cap nut helps prevent thread damage, reduces the risk of injury, and offers a neat, finished look to exposed joints.

Application

Applicable for amenity lighting poles, octagonal poles, decorative poles, and other structures requiring secure and finished bolt connections.
